

MOTOCADDY®

Powered Golf Carts,
Bags & Accessories 2011

Meet the S-Series Range by Motocaddy.

Including the multi-award winning S1 Digital,
S3 Digital and S1 Lite Push Cart

We're very proud of the Motocaddy S-Series range of powered golf carts. Not only are they packed with innovative features but the clever digital technology is highly energy efficient, allowing us to use smaller, lighter batteries with no loss in performance.

All our carts are precision engineered using the best quality components making them lightweight, powerful, quiet, stylish and most importantly very reliable.

With innovative features never seen before on an electric trolley

The super lightweight, reliable and efficient Motocaddy Lithium Battery

USB GPS Charging Port

The S3 Digital features a unique USB port* located on the underside of the handle which can be used to charge a GPS device or Smart Phone running a Golf GPS application.

* Patent pending (09 16857.6)

Patent Pending

Multi-Platform Battery Tray

The Motocaddy S1 and S3 Digital also feature the Motocaddy 'Multi-Platform' battery tray which allows the trolley to be powered by our Standard range, Extended range or Motocaddy Lithium battery.

Why choose a Lithium Battery?

More golfers than ever are choosing our Lithium option and thanks to our innovative multi-platform battery tray, the battery is compatible with all our carts.

Here are the top reasons why you should 'Power up' to lithium:

- Lightweight - Weighs only 2.5kg (28Ah lead acid 11kg)
- Recharging time only 5 hours (28Ah lead acid 10 hours)
- Much longer lifetime than an equivalent lead acid battery
- Comprehensive 2 year warranty
- Trolley can fold flat without having to remove the battery
- Compact and stylish design
- Highly reliable
- Low maintenance
- Battery Management System (BMS) protects trolley & battery

CartLock Pin Code

The S3 Digital also features our innovative CartLock security system allowing you to protect it with a four digit PIN code. Once enabled it has to be entered when you plug the battery in, rendering the trolley useless to would be thieves.

CartLock

The Motocaddy S3 Digital.
Now GPS ready!

With class leading build quality and
award winning features as standard.

S3
DIGITAL

The moment you place your hands on the Motocaddy S3 Digital, you will feel the build quality which sets it apart from the rest. The frame is made from aerospace grade aluminium, making the cart lightweight (only 8.4kg without the battery) but also very sturdy and strong.

The combination of our highly efficient 200W motor and digital control system allows the Motocaddy S3 Digital to be powered by a smaller, lighter battery without sacrificing performance levels.

Available in Black, Titanium or Alpine.

hassle-free troubleshooting

Weight: 8.4kg (without battery)

The S3 Digital is no ordinary golf cart. To start it, simply twist the controller to your favoured speed setting then tap it. To stop simply tap again – no fiddly stuff! While you are travelling, the cart displays your current speed and counts every single yard (or metre). There are three distance readouts to choose from, two of which you can reset at any time. For example, after you've hit your 'Sunday Best' drive, your S3 can measure it for you with incredible accuracy.

When you've reached your ball you can use the S3 to pace out exactly how far you've ripped it past the 150 yard marker, taking the guesswork out of your approach shots. You could use the other readout to show the distance of your entire round and there's also a lifetime reading which can't be reset, showing exactly how many miles (or km) your S3 has on the clock – just like a car. The S3 Digital also features Adjustable Distance Control which allows you to send the cart on any distance between 5 and 60 yards in 5-yard increments, plus other useful information like battery level, speed setting and time.

The Motocaddy S1 Digital.

With all the style, form and performance
to meet the demands of today's golfer

S1
DIGITAL

Since the original Motocaddy S1 was launched in 2006, it has been the fastest selling powered golf cart in the UK. But rather than rest on our laurels, we upgraded it to run on our efficient digital platform taken from the highly successful S3 model. The S1 Digital is incredibly simple to operate with a combined on-off switch and speed controller in one button. Simply twist to one of nine digitally controlled speed settings then tap the button to start. The S1 Digital will smoothly accelerate to your selected speed. Just tap again when you want to stop - there's no need to reduce the speed setting.

As with all the S-Series carts, our efficient digital technology allows us to use a smaller, lighter battery on the S1 Digital with no loss in performance. The cart also shares the same sturdy frame, bag supports, motor and compact locking system as the S3 Digital. Never before has a powered cart been so easy to use and hassle free.

Available in Black, Titanium or Alpine.

Introducing the lightest member
of the S-Series trolley family.

The Ladies' Range.

Designed with the lady golfer firmly in mind,
combining style with performance to match.

Very simply the S1 Lite push cart is based on the S1 Digital with the motor and battery removed. A new foot operated parking brake has been added so you can park it on the hills plus an upgraded locking system which is now the same as our powered carts.

There's a convenient insulated bag that sits between the rear wheels for storing drinks and snacks etc. The S1 Lite freewheels both forwards and backwards allowing it to be pushed or pulled - sometimes it's easier to pull up hills. The S1 Lite is a great option for the budget conscious golfer.

Available in Black or Titanium.

We are proud to introduce the Motocaddy Ladies' range featuring an exclusive version of the S1 Digital trolley combined with our brand new Ladies Club Series Cart Bags.

The Ladies' S1 Digital features all of the high specifications of the standard S1 Digital, but is available in an exclusive Alpine-White colour with Silver touches to complement either of the ladies' Club-Series cart bags perfectly.

The ladies' bags are available in Silver/Pink and Silver/Sky so whichever combination you choose you'll definitely look stylish on the course.

PRO SERIES

Our award winning cart bag range
offering style and quality in abundance

The Pro-Series bag looks fantastic thanks to the stylish PU material construction. The base features our unique cut away slot which fits perfectly onto the lower bag support, preventing the bag from twisting during the round.

As you would expect, there's plenty of room for storage and other features include a large insulated drinks holder, a water resistant valuables pocket with waterproof zip, graphite-friendly dividers plus a dedicated putter well and umbrella holder.

Available in Black/Red, Black/Blue, Alpine/Red and Alpine/Blue.

CLUB SERIES

The NEW lightweight cart bag delivering all
the features you would expect at a great price

Weighing in at only 3.1kg, the new lightweight Club Series Cart Bags are the perfect partner for your Motocaddy trolley.

Features include our unique anti-twist base - designed to prevent your bag from twisting, plus four ball and accessory pockets, insulated drinks pocket, two clothing pockets, 11-way full length dividers, Velcro glove grip and towel hook and a detachable rain hood.

Available in Black/Red, Black/Blue, Silver/Pink and Silver/Sky.

The Motocaddy accessory range.

When it comes to accessories, we have it covered with the comprehensive range of Motocaddy accessories.

The Innovative Motocaddy Accessory System

Our exclusive accessory-combo is designed for golfers who like to be prepared for everything on the course.

Having re-designed the Umbrella Holder, Drinks Holder, Scorecard Holder and Device Cradle, we are pleased to announce that these can all now be fitted to your S-Series trolley using the simple Accessory Station.

The difficult decision is choosing which combo to go for!
